Mike,

Notes on the laser alignments of the 2 pumps.

-Pump#2 laser alignment went very well and smooth, "Excellent" Alignment was achieved. Did also adjust "outboard" packing gland to control the amount of water through the gland.

-Pump#1 laser alignment went well, "Excellent" Alignment was achieved, but in order to achieve alignment motor was removed and 1 of the "spacer blocks" under the motor was removed, in order to allow me to "move" the motor into alignment with the pump.

Service Technicians: Paul Brokaw would like to thank you for the opportunity to serve your company and your Laser Alignment needs.

Please feel free to contact us with any questions and future needs.

Paul Brokaw
